## Installation Notes:

During Installation the SetUp.ini file receives data collected from the installation program including the location of the logger program location, the common log file location and the Privacy Code. The Privacy Code is generated from the installation computer.

It is important to note that the Privacy Code is a unique identifier that protects your saved time values and each user that is logged is grouped according to this code.

The Privacy Code and the common log file location are also saved to the CadTempo.ini file which is then saved to the Configure subfolder of the CadTempo program location

## Operational Notes:

Adjustments made to the timers, applications and file extensions within the options settings of the CadTempoView program are saved to the CadTempo.ini file in the Configure subfolder of the CadTempo program location. When you close the viewer program you are prompted to cause the current running logger to update. If you select no the logger will update on its next start up.

The session timer begins recording when the first monitored program is detected. The timer continues while the monitored program process count is greater than 0. After all monitored programs close the Sessions.dat file is updated with the recorded session.

Should you decide to purchase CadTempo you may utilize the built in purchase order generator. To use this feature you must have started the CadTempoView program as an administrator. In Vista you must have full security elevation. Registration of CadTempo also requires full security elevation.

If you experience any difficulties with your installation or operation of CadTempo please make certain you contact us. We are committed to providing superior customer support. Please include details regarding your operating system. You might also send a copy of the Setup Log xxxx-xx-xx #xxx.txt file that is located in the Windows Temp Folder.

**Thank you for considering CadTempo**
